Vedika Multi Services

Most of the water tanks below the outlet. Water in this portion of the tank usually down in this tank stagnant and never used. This in turn provides a breeding ground for harmful virus, bacteria, cysts, and other micro-organism.

The sidewalls of the water tank due to continuous dampness develop moss and fungal growth. All these, if left unattended for a long time, can be health hazard for people consuming this water. In manually cleaning, they don't scrub inner portion of water tank properly and don't remove fungus, moss, debris from the tank.

We have developed latest modern scientific process and modern processor that can give you satisfaction and hazard free health.
